- 7 Functional & Performance Testing
- 8 Advantages and Limitations
- 9 Conclusion
- 10 Future Scope
- 11 Appendix

Document note

The reference document supplied for this project contained demonstration material and example screenshots. In this final version, the demonstration screenshots have been excluded and the testing evidence has been replaced with the actual Salesforce screenshots supplied with the project. The written structure and terminology are retained at a project-report level while the implementation evidence is tied to the supplied screenshots.

1. Introduction

1.1 Project Overview

The Student Enrollment & Course Management System (SECMS) is a Salesforce-based application designed to centralize student, course, instructor and enrollment information within a unified academic management environment. The system supports structured enrollment processing, approval handling, validation, automation and reporting.

The solution is intended to reduce fragmented, manual enrollment activities by providing a consistent workflow for maintaining academic records and monitoring enrollment-related information. Salesforce Lightning provides the user interface, Salesforce Objects provide the data layer, and Salesforce automation and reporting capabilities support the operational workflow.

1.2 User Story

As an academic administrator or enrollment officer, I want to manage student records, course offerings, instructor information and enrollment requests in one Salesforce application so that academic enrollment activities can be handled systematically and monitored through reports and dashboards.

1.3 Purpose

The primary purpose of SECMS is to replace fragmented enrollment handling with a centralized and structured Salesforce solution. The system focuses on accurate data management, controlled enrollment processing, validation, approval handling and transparent reporting.

Objective	Project focus
Centralized data	Maintain student, course, instructor and enrollment information in Salesforce.
Structured workflow	Organize enrollment requests, status changes and approval activities.
Validation	Prevent invalid enrollment states through business rules.
Automation	Use Salesforce automation for recurring enrollment-related actions.
Reporting	Provide reports and dashboards for monitoring and analysis.

2. Ideation Phase

2.1 Problem Statement

Enrollment operations can become difficult to manage when student, course and registration information is distributed across separate files, emails or manual processes. This can lead to repeated data entry, delayed approvals, difficulty tracking status and reduced visibility for administrators.

The project therefore focuses on a centralized Salesforce application where the main academic entities are connected and the enrollment lifecycle can be managed through defined records, validation rules, approvals, automation and reporting.

2.2 Empathy Map - Enrollment Officer

Area	Observed need
Think & Feel	Concern about duplicate entries, delayed approvals and incomplete information.
Hear	Questions and follow-ups from students and management.
See	Multiple records, manual follow-ups and changing enrollment status.
Say & Do	Recheck information, update records and follow up on pending requests.
Pain	Duplicate work, approval bottlenecks and limited visibility.
Gain	Centralized records, automation, faster processing and dashboard visibility.

2.3 Brainstorming and Idea Prioritization

- Spreadsheet-based automation
- Standalone enrollment portal
- ERP integration
- Salesforce-based enrollment system

The Salesforce approach aligns the project with a cloud-based platform that already provides data management, workflow automation, security controls, reports and dashboards.

3. Requirement Analysis

3.1 Customer Journey

The proposed journey covers the academic enrollment lifecycle from registration through course selection, enrollment request, fee handling, approval, instructor assignment and reporting.

Stage	System activity
Awareness & Registration	Capture student information and create the student record.
Course Selection	Maintain course information and identify the selected course.
Enrollment Request	Create an enrollment record and associate student and course.
Fee Payment	Track the fee-paid status associated with the enrollment.
Approval	Route requested enrollments through the configured approval process.
Instructor Assignment	Associate the enrollment with an instructor as required.
Reporting & Completion	Monitor enrollment information using reports and dashboards.

3.2 Functional Requirements

ID	Requirement	Description
FR-1	Student Management	Create and maintain student records.
FR-2	Course Management	Create and maintain course information.
FR-3	Enrollment Processing	Create, update and manage enrollment requests and statuses.
FR-4	Instructor Assignment	Associate instructors with enrollment records.
FR-5	Reporting	Generate reports and dashboards for operational monitoring.

3.3 Non-Functional Requirements

Requirement	Expected behavior
Usability	Clear navigation, organized records and simple operational screens.
Security	Access to academic data should be restricted to authorized users.
Reliability	Enrollment processing and automation should execute consistently.
Performance	Records, searches, reports and dashboards should remain responsive.
Scalability	The design should support additional students, courses and users.
Availability	The cloud application should be accessible during institutional operations.

3.4 Data Flow

The system follows a simple operational flow: users enter or update academic information; Salesforce stores the records; validation rules check business conditions; approval processes route requested enrollments; automation updates related information; and reports and dashboards consume the resulting data.

User Admin / Enrollment Officer / Instructor	Salesforce Lightning Navigation & Records	Salesforce Objects Student • Course • Instructor • Enrollment
↓	↓	↓
Business Controls Validation Rules	Workflow Approval Process & Flows	Insights Reports & Dashboards

3.5 Technology Stack

Layer	Technology / Salesforce capability
User Interface	Salesforce Lightning
Logic / Automation	Salesforce Flows
Database	Salesforce Custom Objects
Business Rules	Validation Rules and Approval Process
Reporting	Salesforce Reports and Dashboards

4. Project Design

4.1 Problem-Solution Fit

The system maps the enrollment problem to Salesforce-native capabilities. Centralized objects address fragmented data; validation rules address incorrect states; approval processes address controlled decision-making; automation supports repetitive tasks; and dashboards provide a consolidated operational view.

4.2 Proposed Solution

Parameter	Description
Problem	Manual and fragmented enrollment handling.
Solution	Salesforce-based Student Enrollment & Course Management System.
Core capability	Centralized records with validation, approval and reporting.
Scalability	Additional departments, courses and users can be introduced within the Salesforce model.

4.3 Solution Architecture

The logical architecture consists of four connected areas: the Lightning user interface, Salesforce data objects, automation and control services, and reporting. The principal custom objects are Student, Course, Instructor and Enrollment. Enrollment connects the major academic entities and acts as the central transaction record.

5. Project Planning & Scheduling

5.1 Planning Approach

The reference project uses an Agile-oriented structure with epics, user stories, story points and sprint-based execution. The planning model divides the work into setup, data modeling, automation, reporting and dashboard activities.

Sprint	Epic / focus	Representative work	Points
Sprint 1	Developer Setup & Data Modeling	Developer org, Student/Course/Instructor/Enrollment objects	20
Sprint 2	Application Configuration	Tabs, Lightning app, fields, relationships, layouts	20
Sprint 3	Automation & Controls	Validation rules, flows, approval process	20
Sprint 4	Reporting & Monitoring	Reports, dashboard, security and final testing	20

5.2 Development Milestones

No.	Milestone
1	Salesforce Developer Account Creation
2	Custom Object Creation – Student, Course, Enrollment, Instructor
3	Tabs Creation
4	Lightning App Creation
5	Fields Creation
6	Create Relationships
7	Page Layout Customization
8	Validation Rules
9	Flows / Automation
10	Approval Process
11	Reports
12	Dashboards
13	Security Setup
14	Finalization and Documentation

6. Project Development & Salesforce Configuration

6.1 Salesforce Environment

The application is implemented in a Salesforce Developer Edition environment using Lightning navigation. The supplied screenshots show the project application with navigation for Students, Courses, Instructors, Enrollments, Reports, Dashboards and Tasks.

6.2 Custom Objects

Object	Purpose
Student	Stores student identity, contact and status information.
Course	Stores course name, category, fee and description information.
Instructor	Stores instructor identity, code, expertise and contact information.
Enrollment	Connects a student to a course and records enrollment status, date, fees and instructor information.

6.3 Student Object Fields

Field	Type / role
Student Name	Text / record name
Email	Email
Phone	Phone
Date of Birth	Date
Student Status	Picklist
Address	Text Area

6.4 Course Object Fields

Field	Type / role
Course Name	Text / record name
Category	Picklist
Duration	Number / text as configured
Course Fee	Currency
Description	Text Area

6.5 Instructor Object Fields

Field	Type / role
Instructor Name	Text / record name
Instructor Code	Text
Expertise	Picklist
Phone	Phone
Email	Email

6.6 Enrollment Object Fields

Field	Type / role
Student	Lookup to Student
Course	Lookup to Course
Instructor	Lookup to Instructor
Enrollment Date	Date
Enrollment Status	Picklist
Fees Paid	Checkbox
Total Amount	Currency
Comments	Text Area

6.7 Relationships

Enrollment acts as the connecting record between Student, Course and Instructor. Lookup relationships allow an enrollment to reference the relevant student, course and instructor records while keeping the information centralized.

6.8 Page Layouts and Record Types

The project structure supports customized page layouts and record types for enrollment processing. The reference configuration distinguishes New Enrollment and Re-Enrollment layouts so that the information displayed can be aligned with the type of transaction.

6.9 Validation Rules

A key validation rule shown in the supplied implementation evidence is `Fees_Must_Be_Paid_Before_Approval`. The rule prevents an enrollment from reaching an approved state when the Fees Paid checkbox is false. The configured error message is: "Fees must be paid before approving an enrollment."

This business rule is important because it keeps the approval state consistent with the payment status recorded on the enrollment.

6.10 Approval Process

The supplied Salesforce configuration screenshot shows an active approval process named `Approval_Enrollment_Request`. Its entry condition is based on Enrollment Status being Requested, and the process is configured for enrollment approval handling.

6.11 Reports and Dashboards

The reporting layer provides operational visibility. The project reference defines reports such as Students by Status, Enrollments by Course, Pending Enrollment Approvals and Revenue Report – Fees Paid. The supplied screenshots provide direct evidence for Students by Status and the Student Management Dashboard.

7. Functional & Performance Testing

Testing evidence in this final document uses only the actual Salesforce screenshots supplied with the project. No demonstration screenshots from the reference document are included.

7.1 Test Coverage Summary

Test area	Evidence supplied
Student configuration	Student Fields & Relationships screenshot
Course configuration	Course Fields & Relationships screenshot
Instructor configuration	Instructor Fields & Relationships screenshot
Enrollment configuration	Enrollment Fields & Relationships screenshot
Validation	Active enrollment validation rule screenshot
Approval	Active enrollment approval process screenshot
Reporting	Students by Status report screenshot
Dashboard	Student Management Dashboard screenshot

7.2 Student Object - Fields & Relationships

The screenshot shows the Student custom object in Object Manager and its configured fields, including Address, Date of Birth and Email, together with Salesforce-managed fields such as Created By and Owner.

The screenshot displays the Salesforce Object Manager interface for the 'Student' object. The 'Fields & Relationships' tab is selected, showing a list of 10 items sorted by Field Label. The table below summarizes the visible fields:

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Address	Address__c	Text Area(255)		
Created By	CreatedById	Lookup(User)		
Date of Birth	Date_of_Birth__c	Date		
Email	Email__c	Email		
Last Modified By	LastModifiedById	Lookup(User)		
Owner	OwnerId	Lookup(User,Group)		✓

Figure 7.1: Actual Salesforce implementation screenshot supplied for the project.

7.3 Course Object - Fields & Relationships

The screenshot shows the Course object and configured fields including Category, Course Fee, Course Name and Description.

The screenshot displays the Salesforce Setup interface for the 'Course' object. The left sidebar shows navigation options: Details, Fields & Relationships (selected), Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, and Related Lookup Filters. The main content area is titled 'Fields & Relationships' and shows a list of 9 items, sorted by Field Label. The list includes fields like Category, Course Fee, Course Name, Created By, and Description, each with its field name, data type, and indexing status.

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Category	Category__c	Picklist		
Course Fee	Course_Fee__c	Currency(16, 2)		
Course Name	Course_Name__c	Text(100)		
Course Name	Name	Text(80)		✓
Created By	CreatedById	Lookup(User)		
Description	Description__c	Text Area(255)		

Figure 7.2: Actual Salesforce implementation screenshot supplied for the project.

7.4 Instructor Object - Fields & Relationships

The screenshot shows the Instructor object and configured fields including Email, Expertise and Instructor Code.

The screenshot displays the Salesforce Setup interface for the 'Instructor' object. The left sidebar shows the navigation menu with 'Fields & Relationships' selected. The main content area shows a table of fields for the 'Instructor' object, sorted by Field Label. The table has columns for Field Label, Field Name, Data Type, Controlling Field, and Indexed. The fields listed are: Created By, Email, Expertise, Instructor Code, Instructor Name, and Last Modified By.

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Created By	CreatedById	Lookup(User)		
Email	Email__c	Email		
Expertise	Expertise__c	Picklist		
Instructor Code	Instructor_Code__c	Text(50)		
Instructor Name	Name	Text(80)		✓
Last Modified By	LastModifiedById	Lookup(User)		

Figure 7.3: Actual Salesforce implementation screenshot supplied for the project.

7.5 Enrollment Object - Fields & Relationships

The screenshot shows the Enrollment object and its field configuration, including Course, Enrollment Date, Enrollment Status, Fees Paid, Instructor and Student lookup fields.

The screenshot displays the Salesforce Object Manager interface for the 'Enrollment_c' object. The left sidebar shows navigation options: Details, Fields & Relationships (selected), Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Restriction Rules, Scoping Rules, Object Access, Field Access, Triggers, Flow Triggers, Validation Rules, and Conditional Field. The main area is titled 'Fields & Relationships' and shows 16 items, sorted by Field Label. The fields are listed in a table with columns for Field Label, Name, Data Type, and a checkmark indicating if the field is active. The relationships are listed in a table with columns for Relationship Name, Object, and a checkmark indicating if the relationship is active.

Field Label	Name	Data Type	Active
Course	Course__c	Lookup(Course)	✓
Created By	CreatedById	Lookup(User)	✓
Enrollment Date	Enrollment_Date__c	Date	✓
Enrollment Name	Name	Text(80)	✓
Enrollment Status	Enrollment_Status__c	Picklist	✓
Fees Paid	Fees_Paid__c	Checkbox	✓
Instructor	Instructor__c	Lookup(Instructor)	✓
Last Modified By	LastModifiedById	Lookup(User)	✓
Owner	OwnerId	Lookup(User/Group)	✓
Record Type	RecordTypeId	Record Type	✓
Student	Student__c	Lookup(Student)	✓
Student Email	Student_Email__c	Formula (Text)	✓

Figure 7.4: Actual Salesforce implementation screenshot supplied for the project.

7.6 Validation Rule Evidence

The screenshot shows an active validation rule named Fees_Must_Be_Paid_Before_Approval. The rule checks the approval state against the Fees Paid checkbox and displays the configured error message at the top of the page.

Figure 7.5: Actual Salesforce implementation screenshot supplied for the project.

7.7 Approval Process Evidence

The screenshot shows the active Approval_Enrollment_Request process. The entry criteria are based on Enrollment Status = Requested and the process is configured as an enrollment approval workflow.

Figure 7.6: Actual Salesforce implementation screenshot supplied for the project.

7.8 Report Evidence - Students by Status

The screenshot shows the Students by Status report with one visible record and columns for Student Status, Student Name, Email and Phone.

Figure 7.7: Actual Salesforce implementation screenshot supplied for the project.

7.9 Dashboard Evidence - Student Management Dashboard

The screenshot shows the Student Management Dashboard with a Students by Status component and a Revenue Report (Fees Paid) component. The dashboard provides a consolidated monitoring view.

Figure 7.8: Actual Salesforce implementation screenshot supplied for the project.

7.10 Testing Interpretation

The supplied evidence demonstrates the configuration of the core data model, an enrollment business rule, an approval workflow, a report and a dashboard. Together, these screenshots provide traceable evidence that the project configuration is present in the Salesforce environment.

The report and dashboard screenshots also show that the configured records can be surfaced through Salesforce analytics components. The validation and approval screenshots demonstrate that business controls are configured at the Salesforce setup level rather than being described only as requirements.

7.11 Performance Considerations

The project is designed to use Salesforce-native objects, automation and reporting so that the application can support centralized academic records without requiring a separate database layer. Performance should be monitored as record volume, automation complexity and dashboard usage increase.

8. Advantages and Limitations

8.1 Advantages

Area	Description
Centralized data	Student, course, instructor and enrollment information is maintained within one Salesforce environment.
Workflow control	Validation and approval mechanisms provide structured handling of enrollment records.
Automation	Salesforce Flows can reduce repetitive manual actions.
Reporting	Reports and dashboards provide visibility into operational information.
Cloud platform	Users can work within the Salesforce environment without maintaining a separate application server.

8.2 Limitations

Limitation	Implication
Salesforce dependency	The application depends on Salesforce platform capabilities and configuration.
Initial configuration effort	Objects, fields, relationships, automation, security and reporting require setup.
Data volume considerations	Growing record volume and automation complexity require ongoing administration.
Feature coverage	Additional integrations such as payment gateways or student portals would require further development.

9. Conclusion

The Student Enrollment & Course Management System provides a structured Salesforce approach for managing the academic enrollment lifecycle. The design brings together Student, Course, Instructor and Enrollment objects and adds business controls through validation rules and an approval process.

The supplied implementation evidence demonstrates the configured data model and key operational controls, together with a report and dashboard for monitoring. This creates a consistent foundation for enrollment administration and provides a clear path for future automation and integration.

The project demonstrates how Salesforce configuration features can be combined to transform a fragmented academic process into a centralized cloud-based management workflow.

Key outcome

A single Salesforce application structure for academic enrollment data, supported by validation, approval handling, reporting and dashboard-based monitoring.

10. Future Scope

Future enhancement	Potential extension
Payment gateway integration	Connect online fee payment and payment confirmation with enrollment records.
Student self-service portal	Allow students to view courses, submit enrollment requests and track status.
Advanced analytics	Add trend analysis and richer operational KPIs for enrollment and revenue.
Mobile access	Extend key enrollment activities to mobile-friendly interfaces.
Expanded automation	Introduce additional notification, follow-up and assignment workflows as required.

The future scope is intentionally presented as extension work rather than as functionality claimed as already completed in the supplied evidence.

11. Appendix

11.1 Implementation Evidence Index

Figure	Evidence
7.1	Student Object – Fields & Relationships
7.2	Course Object – Fields & Relationships
7.3	Instructor Object – Fields & Relationships
7.4	Enrollment Object – Fields & Relationships
7.5	Enrollment Validation Rule
7.6	Enrollment Approval Process
7.7	Students by Status Report
7.8	Student Management Dashboard

11.2 Core Salesforce Configuration Summary

Component	Configured role
Student	Academic person record
Course	Course catalogue record
Instructor	Instructor profile and expertise record
Enrollment	Transaction connecting student, course and instructor
Validation Rule	Controls approval based on fee payment status
Approval Process	Handles requested enrollment approval
Reports	Presents structured operational data
Dashboard	Consolidates key report components
